### MEDIUM CAROUSEL

The M carousel uses the highest quality components - strong bearings and a single "compression" spring produce a smooth print arm action.

Side clamps and micro-registration are combined with an adjustable pallet arm height for an extremely rigid print platform.

The registration forks are factory set and require no lubrication or adjustment - "All arms down".

The print arms have adjustable up-screen positions and the single spring has adjustable tension to accommodate different screen weights.

The modular construction gives expandability from 4/1 to 6/6.

As options Micro adjustment and a variety of Hold-Down systems, vacuum pallets as well as semi automatic printing system, the ERGO-Printer can be supplied.
