

# VACUUM CAROUSEL FOR PRINTING MULTICOLOR TRANSFERS

Manual carousel specially designed for printing transfers and other multicolor jobs on paper, plastic ect. Printing in the same simple way as normal T-shirt printing with a spotheater in between.

As all our other machines it is modular build, and can be equipped to meet your special demands, up to 6-colours and 6-pallets.

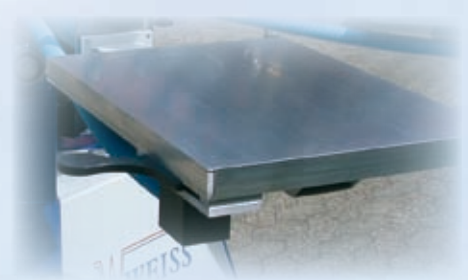

The vacuum-mechanism is rotatable and every single pallet has it's own on/off contact. The silent vacuum-motor is placed under the machine.

The machine is extremely rigid and accurate build. It is constructed after the same strong principles as bigger fully-automatic carousels, which enables you to print very high quality manually.

In our smart modular system it's also an option to mount semi-automatic printheads so you get an ERGO-Printer, or to supply it with a mix of vacuum pallets and traditionally pallets as well as Hold-Downs.

The vacuum system

Vacuum pallet

Vacuum motor

Pallet arm support

Roto-vacuum distributor
